

CHESAPEAKE UROLOGY ASSOCIATES –

The Region's Leading Experts in Diagnosis and Treatment of Kidney Cancer

CHESAPEAKE UROLOGY'S KIDNEY CANCER EXPERTS

Renal cell carcinoma (RCC) is the most common type of adult kidney cancer and is a mass that grows in the urine producing portion of the kidney. Affecting about 32,000 Americans each year, this cancer usually responds well to treatment when caught early.

Our physicians are on the leading edge of the most sophisticated technology, diagnostic and minimally invasive surgical procedures, as well as clinical trials.

Chesapeake urology's team of kidney cancer specialists not only deliver the most advanced medical, surgical and oncologic care, but do so with compassion, so you can feel confident that your patients are in the very best hands.

At Chesapeake Urology, our physicians are leading experts in the diagnosis and treatment of kidney cancer. Our team of cancer professionals is dedicated to delivering the most advanced, compassionate and personalized care to ensure the best possible outcomes for patients with renal cell carcinoma.

DIAGNOSING RENAL CELL CARCINOMA

Chesapeake Urology's kidney cancer specialists are experienced in the most advanced diagnostic techniques that can identify renal cell carcinoma quickly and accurately. In addition to a comprehensive medical exam, diagnostic tests may include:

- CT Scan, MRI or ultrasound
- Urinalysis
- Blood tests
- X-ray or bone scan to determine if cancer has spread to the lungs or bones
- Needle biopsy of the kidney mass, in rare circumstances

TREATING RENAL CELL CARCINOMA

Chesapeake Urology physicians have extensive experience in the most advanced treatments for kidney cancer including minimally invasive surgery, which provides patients with a quicker recovery, less pain and fewer surgical complications. Treatment will depend on a number of factors, including a patient's age and overall health and the extent to which the cancer has spread.

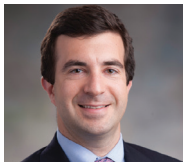

- **Surgery** - the standard treatment for renal cell carcinoma, the following procedures can be performed laparoscopically or robotically:
 - Nephrectomy
 - Radical nephrectomy
 - Partial nephrectomy
- **Cryosurgery**
- **Radiofrequency ablation**
- **Targeted therapy**
